GRECOTEL FILOXENIA, THE FIRST 5G HOTEL IN GREECE

The Filoxenia hotel of the Daskalantonakis Group - Grecotel is the first 5G hotel in Greece that introduces a brand new communication experience for its guests. Particularly, the luxurious Filoxenia in Kalamata is fully covered with high-speed 5G technology, as the telecommunications company WIND Hellas launched the first pilot network in city conditions on July 12th.

Mr Ilias Kyriakakis, Member of the Board of Directors and Grecotel Group CIO, said: *"We are delighted that our hotel Filoxenia in Kalamata was chosen for the pilot implementation of the WIND 5G network, incorporating and exploiting the most modern technologies, always aiming at the better service of our guests. Fifth Generation (5G) networks completely change the perception of what is technologically feasible. In the new digital age, hotel businesses have to transform all the reception and guest functions of their guests and adapt to the new technological standards, as per Grecotel's common practice and belief."*

Particularly noteworthy, is that the luxurious Grecotel Filoxenia is located in the most beautiful corner of the Messinian Bay, on a magnificent beach with crystal clear waters. In a 40 acres green area next to the sea, bright rooms with a unique view will welcome guests. Relax in the jacuzzi pool and indulge in the healing treatments at the Olive Spa. Walk to the promenade by the sea below the palm trees and in the city of

Kalamata with magnificent neoclassical and historical buildings, the traditional taverns and the famous cultural festival. It's the ideal starting point for excursions to discover the enchanting Mani and the endless beauties of Messinia.
